facilities

ADT3000
control platform

FireWorks™
graphical command interface

A powerful system flexible enough to handle facilities of any size

ADT control panels have both the power and the capacity to handle any sized healthcare facility, from the smallest retirement home, to the largest medical center.

The incomparable ADT3000 control platform combines support for intelligent Signature Series detection with an unstoppable multi-priority peer-to-peer token ring network. With eight multiplexed audio channels, ADT3000 also offers voice evacuation for life safety functions — and mass notification capabilities for other threats to the safety of facility occupants. Meanwhile, Synergy enabled ADT3000 pulls double-duty as a cost-effective unified system combining fire alarm with security and access control.

Whether your hospital needs basic fire alarm — or sophisticated networked life safety, mass notification, and security —ADT3000 offers a flexible solution that will protect facility occupants and safely guide your patients and staff out of harm's way.

Comprehensive control and monitoring leaves nothing to chance

FireWorks delivers a highly effective, yet surprisingly simple means of monitoring and control by organizing all necessary life safety network information into context-sensitive event-driven screen quadrants that graphically display your buildings down to the detail of a single patient room.

Able to monitor all facilities across a multi-facility operation remotely over a LAN or WAN, or even the World Wide Web, FireWorks provides the means for getting the right information to the right people at the right time. And it does so quickly and efficiently.

When used to blend multiple functions into a single point of monitoring and control, the true power of FireWorks becomes apparent. Regardless of who manufactured your system, FireWorks can monitor the status of smoke, heat, and motion detectors, while keeping a tabs on who enters your hospital – or a protected area – and when.

Every caregiver's first responsibility is to the safety and security of the lives with which they are entrusted. With powerful features and valuable options geared expressly for the healthcare industry, ADT's fire, security, and access control systems ensure that your responsibilities are met, and your patients and staff are as safe and secure as they can be. Find out how you can make us part of your life saving team. .

QuickStart Fire Alarm™ Control Panels

Signature Series™ intelligent detectors

Genesis Series™ signals

Dual mode panels offer the best of both worlds — economy *and* reliability

Conventional or intelligent? With Quick-Start you no longer have to make the commitment to either. Specify conventional now. Upgrade to intelligent devices later. Or put Signature Series into a new addition and keep existing devices in the rest of the building. The choice is yours!

QuickStart's dual capability avoids costly all-or-nothing retrofits by allowing the installation of upgraded field devices in one part of a building, while existing devices remain in service in another. This flexible migration path is a cost-effective solution that will take your facility from conventional technology to more reliable and efficient intelligent detection at a pace that will suit any budget.

QuickStart is also ideal for new installations. With its simple programming and easy operation, this family of fire alarm control panels lives up to its name in every respect!

Unparalleled reliability for new installations, unequaled economy for retrofits

Signature Series detectors and modules provide the reliability modern healthcare settings demand. The world's most sophisticated fire detection solution, Signature Series is rich with performance benefits and cost-saving features.

The secret behind the success of Signature Series is that these detectors don't simply react to conditions – they interpret information from several sources. This means that a single multisensor detector can distinguish between a harmless puff of dust and a wisp of smoke; between the hot, humid conditions of a laundry room, and a serious life safety condition in a patient ward.

What's more, Signature Series' reporting functions are so reliable that sensitivity testing of individual detectors is not required, and it's communications is so stable that existing wiring can be used in most retrofit applications!

Signaling solutions geared specifically to healthcare settings

Genesis Series notification appliances represent the rebirth of fire alarm signals with looks, features, and benefits ideal for healthcare facilities. Wall strobes, horns, and chimes about the size of a deck of playing cards offer a discreet alternative to bulky devices, while speakers and ceiling models with clean modern lines blend inconspicuously with their surroundings.

Genesis brings on-demand signaling to every application with an unparalleled range of field-configurable options including high/low dB output settings, wattage tap selections, and selectable candela output and flash rate.

These options deliver the kind of signaling control hospitals need. In fact, Genesis strobes feature the industry's first and only private mode temporal flash. Developed specifically for healthcare settings, this feature reduces power demands and cuts equipment costs.

Why is ADT the right choice for your healthcare facility?

From pioneering work in multisensor technology, to award-winning design breakthroughs, ADT has established itself as the leader in cutting-edge systems technology. Today our name is synonymous with innovation and quality, and we are widely regarded as the company that has achieved some of the most significant and forward-looking advances in our field.

The true beneficiaries of these advances, however, are the people that make the biggest investment in our products and systems – decisionmakers like you who trust ADT to deliver the most effective protection for their people, property, and assets.

One of the most important ways we meet our goals is by focusing on life safety markets that require special attention. Healthcare is one of those areas. Every new product, every enhancement, and every development undergoes intense scrutiny from a healthcare application perspective. We consult with industry experts in the field as well as our own in-house healthcare specialists to design and engineer products specifically geared to your facility. That's why, when it comes to choosing the best life safety systems and equipment, hospitals around the globe go with the leader in life safety and security technology: ADT.
